TECHNICAL SKILLS

Languages **Proficient: Python, Django, SQL, Machine Learning, Deep Learning**
Experience: HTML, CSS,Javascript
Tech Stack **PyTorch, TensorFlow, Scikit-learn, MLflow, Git, Digitalocean, Bash/Zsh, Linux, PyCharm, Jupyter Notebook**

EXPERIENCE

Web Developer Intern **May 2025 -June 2025**
Leads and Leads *Remote, Chennai, India*

- Worked on the design and development of a **full-stack e-commerce web application** using **Django and PostgreSQL**.
- Implemented core commerce functionality including **product catalogs, cart workflows, user authentication, order management, and Razorpay payment integration**.
- Collaborated with stakeholders to refine UI/UX and improve application performance prior to deployment.

Freelancer **Jan 2025 - Present**
Independent Projects

- Delivered **10+ static and dynamic e-commerce solutions** for small businesses across retail and boutique domains.
- Conducted **competitor and market analysis** to identify pricing and feature gaps in existing systems.
- Designed and implemented **flexible pricing architectures**, including fixed pricing, per-unit/per-inch pricing models, and **dynamic add-ons** (e.g., stitching services with variable costs).
- Enabled businesses to better represent product variants and services online, improving clarity for customers and supporting sales growth.

Founder — Event Management SaaS **July 2025 - Present**
Self-Initiated Product

- Conceptualized, designed, and built a **SaaS platform for college clubs** to manage events end-to-end.
- Developed features for **event creation, student registrations, online payments, QR-based check-ins, and automated certificate generation**, replacing manual Google Forms and UPI-based workflows.
- Launched the platform with a live free event, onboarding **100+ real users at launch**.
- Operate the platform on an **on-demand deployment model** due to limited infrastructure funding, focusing on scalability and cost efficiency

PROJECTS

Emotion Detection using CNN **SEP 2025 - NOV 2025**

- Built a **Convolutional Neural Network (CNN)** model to classify human emotions from facial images.
- Performed data preprocessing, augmentation, and model evaluation to improve classification accuracy.

Sequence Modeling using LSTM RNN **DEC 2025 - JAN 2025**

- Designed and implemented **RNN and LSTM architectures** for sequence and time-series prediction tasks.
- Compared vanilla RNN vs LSTM performance to analyze long-term dependency handling.

EDUCATION

Degree subject, level and grade, *University of Something* [Graduation Date]
[Can add any relevant coursework]

EXTRACURRICULAR (Optional)

TECHNICAL SKILLS

Languages **Proficient:** Python and SQL
Experience: FORTRAN, LabVIEW, HTML, CSS
Tech Stack Git, DataBricks, Bash/Zsh, Snowflake, AWS, PyCharm, LaTeX, GUROBI

EXPERIENCE

Data Scientist **Sept 2022 - Present**
Gousto (SCA Investments Limited) *London, UK*

- Working in a cross-functional team of Software Engineers, Analysts, and Product Managers within Forecasting and Combinatorial Optimisation domains.
- Implemented a new recipe popularity forecast machine learning model using LightGBM that improved the lead day 5 forecast by 33%, leading to £500,000 in annual food waste savings. Algorithm was deployed on AWS through lambdas and step functions.
- Implemented a modified version of the Simulated Annealing algorithm to enhance the capacity of eligible orders to be dispatched to factories by 10%, leading to an estimated cost savings of £300,000 per year. Algorithm was deployed on AWS through lambdas and step functions.
- Built a Mixed-Integer Programming algorithm using GUROBI that improved factory throughput by 3%, with an estimated cost savings of £570,000 per year.

Graduate Data Scientist **Sept 2021 - Sept 2022**
Hastings Insurance Services Limited (Hastings Direct) *London, UK*

- Produced a suite of CatBoost models to predict risk prices. This involved building an automated modelling pipeline in Databricks using MLflow with optimised training using Bayesian Hyperparameter Tuning (Hyperopt).
- Developed a fraud model in CatBoost to determine if customers made fraudulent claims on fire and theft vehicles.
- Carried research and development utilising NLP Topic Modeling techniques, specifically Bertopic and LDAvis, to identify key themes within positive and negative reviews of the Hastings Direct App.
- Used XGBoost to forecast the final cost of a claim within 24 hours. The model was optimised through Bayesian Hyperparameter Tuning, resulting in an enhanced accuracy (RMSE) of 80% compared to the previous iteration.

Research Scientist **Feb 2020 - Dec 2020**
National Physical Laboratory *London, UK*

- Conducted novel research on accurate temperature measurement by developing a device called the Acoustic Gradiometer. This device utilised acoustics to measure air temperature gradients.
- Used NI LabVIEW coding software to collect data, autonomously designed experiments, and manually constructed and soldered acoustic circuit-like boards.

EDUCATION

Master of Physics (MPhys) in Physics with Nuclear Astrophysics: 1st Class (75%), *University of Surrey* July 2021

EXTRACURRICULAR

- Active Data Science and Machine Learning content creator on Medium and YouTube. Medium blog currently has 13,800+ followers, 1 million+ total views and 140+ stories published. YouTube channel has over 8,000 subscribers and 300,000+ views.
